Position: Software Developer for Engineering Software, Full-Stack .Net developer, Wise IT

With reference to your online advertisement, I wish to express my interest in joining your team as a Software Developer. Looking through the job description, I see myself fitting seamlessly into the role as my education and experience have prepared me for this opportunity. With over ten years of experience, I could design, develop, implement and test custom software solutions and provide continuous direction and support to team members.

I have a bachelor's degree in software engineering and a master's in Artificial Intelligence, specializing in software development and machine learning.

Throughout my career, I have been acknowledged as a solution-focused professional with the ability to design and develop innovative applications using advanced technologies. I developed and implemented many software, such as Hetra, a windows application for project management and accounting. This project was based on WinForms, which used ADO.NET ORM, LINQ, and SQL Server databases and ensured optimal functionality, quality, and reliability. I have had opportunities to learn and acquire hands-on web/mobile application design and development, programming, JavaScript, HTML and project management skills by supporting SDCIran and working as a self-employed full-stack developer.

I am a fast learner, and I pay close attention to detail with the ability to multitask while maintaining a high level of performance while collaborating with third-party vendors, project managers and different teams on project deliverables.

I am always willing to go the extra mile when required by business needs to meet up with project deadlines.

Further details of my experience and achievements can be obtained from my resume (attached).

I would welcome the opportunity to discuss the job vacancy, and I can be contacted easily via e-mail (vahidalizadeh1990@gmail.com).

Yours Sincerely,

Vahid Alizadeh
